

Mishap Prevention Brief

22d Air Refueling Wing Safety

Number: Sup-99-04

Expires: N/A - Supplemental

Workcenter Safety

Regardless of where you work, safety must be a priority! Evaluate your workcenter - can you identify all the hazards?

- ☑ *Your supervisor must train you on all job safety requirements. Training will include a description of each potential hazard you may encounter and how to effectively avoid injuries.*
- ☑ *Follow all applicable Technical Data for each task. Never take shortcuts or skip steps.*
- ☑ *Always wear all the necessary Personal Protective Equipment for each task. When in doubt, refer to the Hazard Assessment for PPE, applicable Material Safety Data Sheets, or consult your supervisor.*
- ☑ *Before attempting to operate any equipment, ensure you receive complete training and are familiar with all safe operating procedures.*
- ☑ *When performing any lifting operations, follow all manual lifting guidance. Ensure you ask for help when moving any heavy or bulky items. Wear safety-toed boots & work gloves as required.*
- ☑ *Be observant for safety hazards/deficiencies in your work area. Report any violations immediately. Safety is everyone's responsibility!*
